

Discovering Unknown Security Issues through Penetration Testing

Finding gaps and learning best practices

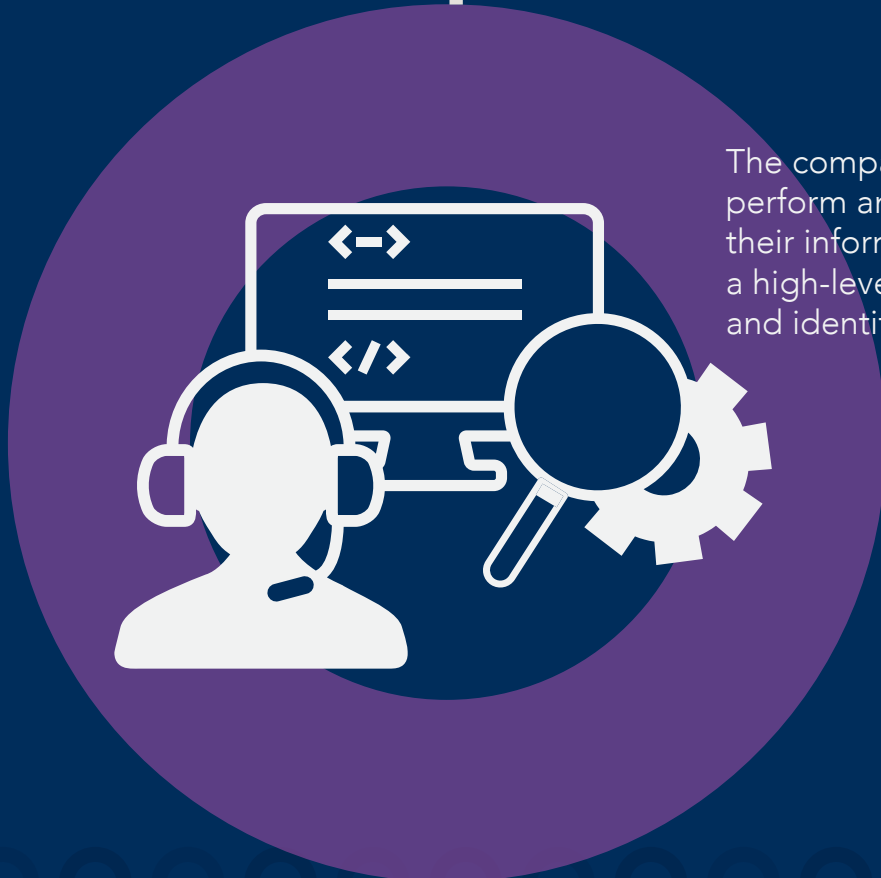

A large pharmaceutical company is responsible for sensitive information assets and **MUST MAINTAIN STRICT COMPLIANCE REQUIREMENTS.**

Because the company works in all phases of prescription drug creation, it is vital that all material remain secure. Any form of a data breach **COULD RESULT IN REPUTATION DAMAGE, FINANCIAL LOSS AND STOLEN INTELLECTUAL PROPERTY.**

The company needed a trusted partner to perform an in-depth security assessment of their information technology assets to gain a high-level view of environment security and identify vulnerabilities.

With this service, Optiv:

<p>Performed an external penetration test and security assessment to identify vulnerabilities and meet compliance requirements.</p>	<p>Completed network protection testing around intellectual property and financial information.</p>	<p>Provided detailed information about the effectiveness of current security measures.</p>
---	---	--

Optiv's security assessment services provided this client with many benefits, including:

Value: with improved security, the client team can remain focused on future projects and business goals.

Identifying issues: through this testing, the client was made aware of previously unknown security vulnerabilities.

Secure environment: the client now enjoys peace of mind that its most important assets are protected.

Recommendations: once vulnerabilities were identified, Optiv provided remediation recommendations.

Compliance: this testing helped satisfy internal compliance requirements.
