Cyber Digital Transformation: OT Security Services
Securely Integrate Operational Technology Into Your Network

Operational technologies (OT) are being connected in ways that weren’t originally expected. Historically, the lack of connectivity to other systems provided a level of security due to the fact a device needed to be physically accessed to alter its programming. New sensor technology, advanced robotics and OT devices allow organizations to maximize digital transformation and utilize information to better manage technology, increase output, and reduce costs and downtime.

The effort to utilize the data provided by OT devices significantly alters an organization’s threat landscape, opening vulnerabilities that previously couldn’t be exploited, and integrating IT and OT environments to provide actionable data while maintaining security can be a challenging endeavor.

Optiv Solutions
Optiv OT Assessments help converge IT and OT systems and processes to securely deliver data to gain competitive advantages, greater efficiencies and new market opportunities.

- **Rapid Threat Assessment**
  Gain visibility into active anomalies, remote connections and misconfigurations in less than two weeks.

- **Physical Security Assessment and OT Penetration Testing**
  Detailed review and identification of critical physical vulnerabilities.

- **Subject Matter Experts On-Demand**
  On-call consultants to review architectures and discuss best practices, including patching, SOAR, Risk, Gaps, and more.

- **Harden and Connect**
  Harden legacy OT networks while planning for future connectivity using a standards-based assessment. The assessment incorporates the desires of the business to connect facilities and builds IT security into the OT ethos of safety.

- **Deployment and Managed Tooling**
  Having OT security subject matter experts install, tune and manage tools leads to higher success and adoption rates.
Optiv is a security solutions integrator – a “one-stop” trusted partner with a singular focus on cybersecurity. Our end-to-end cybersecurity capabilities span risk management and transformation, cyber digital transformation, threat management, security operations, identity and data management, and integration and innovation, helping organizations realize stronger, simpler and more cost-efficient cybersecurity programs that support business requirements and outcomes. At Optiv, we are leading a completely new approach to cybersecurity that enables clients to innovate their consumption models, integrate infrastructure and technology to maximize value, achieve measurable outcomes, and realize complete solutions and business alignment. For more information about Optiv, please visit us at www.optiv.com.
