Orchestrate and automate technologies, processes and people to run a successful IT and security operation

The job of an information security analyst today is rife with repetitive, sometimes mundane tasks that are performed based on the analyst’s best practices. The operations team as a whole doesn’t have it much better. Over the course of budget cycles, organizations acquire new tools, solutions and platforms. Many are fully functional; some haven’t been deployed and very few are integrated with the rest of the security infrastructure.

Understaffed security operations teams suffering from information overload aren’t the only problem. The disparate collection of security solutions in enterprise environments provide alerts without context. Triaging these events involves several repetitive, low value tasks that grow exponentially with each new alert. Human error and oversight increase as the backlog of alerts requiring triage grows. Thankfully, there are now several solutions on the market which address these challenges through enterprise security automation to improve security posture and enable technology rationalization.

Optiv Solutions

Optiv’s Cyber Digital Transformation practice specializes in building, deploying and configuring Security Automation and Orchestration platforms and Technology Automation solutions, which enable and optimize:

- System integration
- Event ingestion and management
- Threat hunting and incident response
- Task automation
- Secrets management
- System and workflow orchestration
- Human intelligence amplification
- Case management
- Collaboration
- Reporting and auditing

How We Do It

Align With Business Objectives

Optiv helps clients design, build and transform successful IT and security operations that align with business objectives, enhancing security posture and enabling technology rationalization.

Our CDX team has extensive experience working with clients to prioritize use cases that will maximize the benefit that SOAR and Automation platforms and solutions can provide and lead to successful runbooks and processes.

Build and Deploy

We build and deploy orchestration and automation solutions, focusing on business requirements, pain points and regulatory compliance.

Configure

Our team of experts can assist clients with configuring their SOAR and automation technologies to achieve their desired business outcomes and remediate any issues from previous deployments and disparate systems.
Outcomes We Deliver

Simplified Solution Architecture

We leverage our depth of technical expertise and best practice approaches to SOAR and Security Automation platforms and technologies to integrate and rationalize disparate systems.

Enhanced security posture

Complex processes will be automated with a security-by-design approach.

Accelerated time to value

We bring value to organizations quickly by prioritizing use cases based on current security posture, impacts to efficiency and level of development effort.

Measurement of results

We’ll help you identify metrics and KPIs that will measure outcomes aligned to your business.

Why Clients Choose Optiv

16 Years
The average experience of our transformation experts

Emerging Technology Expertise:
Not only in orchestration and automation, but also data analytics, DevSecOps, public/private/hybrid cloud and robotic process automation

Industry Experience:
Healthcare, finance, manufacturing, critical infrastructure, retail, aerospace and defense, oil and gas, and more

Inspired Thought Leaders:
Speaking engagements at leading industry conferences, including Microsoft Ignite, AWS re:Invent, RSA Conference, Spark Summit and Black Hat

Optiv’s cloud security specialists hold top certifications from major cloud service providers:

Industry
Cloud Security Alliance CCSK, ISC2 CCSP+

Amazon Web Services
• Specialty: Big Data, Security, Advanced Networking
• Certified: Cloud Practitioner, Solutions Architect, Developer, SysOps Administrator, Solutions Architect, DevOps Engineer

Microsoft
Azure Dev-Ops Engineer Expert, Azure Solutions Architect Expert, Azure Security Engineer Associate, Azure Administrator Associate, Azure Developer Associate, MS-100/101, 200/201, 300/301, 500, 700, 900, MD-100/101

Google Cloud
Professional Cloud Architect, Professional Data Engineer, Cloud Network Engineer, Cloud Security Engineer, Associate Cloud Engineer

Secure your security.

Optiv is a security solutions integrator a one-stop trusted partner with a singular focus on cybersecurity. Our end-to-end cybersecurity capabilities span risk management and transformation, cyber digital transformation, threat management, security operations, identity and data management, and integration and innovation, helping organizations realize stronger, simpler and more cost-efficient cybersecurity programs that support business requirements and outcomes. At Optiv, we are leading a completely new approach to cybersecurity that enables clients to innovate their consumption models, integrate infrastructure and technology to maximize value, achieve measurable outcomes, and realize complete solutions and business alignment. For more information about Optiv, please visit us at www.optiv.com.
