Combine cybersecurity and data analysis to drive business value

As organizations focus on digitally transforming their business and IT environments, traditional data access perimeters are being destroyed. The increasing number of ways access can be gained to sensitive data is convenient for both authorized and unauthorized individuals. Clinging to traditional silos throughout business and cybersecurity environments has led to overly complex infrastructures that hinder threat identification, data analysis and the ability to drive true business value from the data available.

**Optiv Solutions**

Optiv’s Data Fabric for Security and Business (DFSB) is a framework for increasing the value of your data. DFSB simplifies complex data environments by breaking down silos to allow organizations to improve cybersecurity and enable business data analysis. We take a programmatic and product agnostic approach to modernize your security and data processing capabilities. DFSB can deliver full attack surface visibility, integrated detection and automated response options while boosting analytical capabilities to enable enterprise security and observability for value-focused use cases.

Optimize cybersecurity and business data analysis. Mitigate risks, reduce costs and improve services. DFSB provides a modular, framework-based approach to set a strong data foundation. It offers a comprehensive data management solution to drive outcomes across the organization.

DFSB utilizes a robust data lifecycle management architecture to normalize information across all data sources in order to better identify and respond to cyber threats. This allows you to capitalize on organizational data to make more informed business decisions. You’ll gain broad visibility across the entire attack surface, an integrated detection and response capability and analytical capabilities that integrate security into your business.

**How We Do It**

**Tool Rationalization**
Reduce duplicative technologies

**Modular Architectures**
Stay agile while leveraging best-of-breed technologies and eliminating solutions that do not integrate well with other platforms

**Integration**
Break down silos between data sources, search/hunt capabilities and data analysis tools

**Orchestration/Automation**
Reduce the burden on your security staff

**Data Science and Machine Learning**
Utilize security data analysis to inform business decisions
Optiv Security is the cyber advisory and solutions leader, delivering strategic and technical expertise to more than 7,000 companies across every major industry. We partner with organizations to advise, deploy and operate complete cybersecurity programs from strategy and managed security services to risk, integration and technology solutions. With clients at the center of our unmatched ecosystem of people, products, partners and programs, we accelerate business progress like no other company can. At Optiv, we manage cyber risk so you can secure your full potential.
