Proactively Revitalize Response Capabilities

Ensuring adequate security in the rapidly changing cyber realm is a daunting task. Simply implementing technology solutions can quickly create a false sense of security and lead to complacency. In order to address modern cyber threats, the people, processes and technology in your organization need to be able to respond quickly and efficiently. Even with an incident response plan or playbooks in place, you need an objective viewpoint to assess your current capabilities. Gaps in tools and technology are not always identified by internal incident management teams, and without this visibility, gaps go unidentified and complacency begins to creep in, creating a recipe for cyber incidents.

Optiv’s Solution

Optiv’s team of incident management and security operations professionals have the necessary experience to examine your current incident response framework, tools and technology, identify potential gaps and provide a roadmap for improvement. Our Incident Response and Readiness Assessment (IRRA) will help ensure that your incident response capability is measured against today’s threat landscape and industry best practices.

Optiv’s IRRA utilizes a phased project management approach with an Incident Response Framework that incorporates industry best practices. This process results in a rapid and tailored analysis of your organization’s ability to prepare and respond to a cyber incident. From this analysis, Optiv will provide you a custom roadmap that identifies gaps and provides detailed recommendations to enhance your incident response capability.
Optiv’s Incident Response Readiness Approach

1. **Collection**
   Optiv’s experts collect documentation and identify and interview relevant stakeholders.

2. **Analysis**
   Our team reviews and evaluates documentation, interview responses, tools and technology.

3. **Reporting**
   We deliver comprehensive documentation that assesses current state, identifies gaps and provides a roadmap for enhanced incident response capabilities.

**Process Overview**
Optiv’s IRRA framework utilizes a comprehensive three-phased approach of Collection, Analysis and Reporting that enables our subject matter experts to obtain a complete picture of your organization’s incident response readiness. Through collection and analysis, we’re able to identify gaps within your current response capability. From here, we can provide a roadmap incorporating timely intelligence on threats, along with improvements to your response capability that align with your security posture.

This comprehensive approach ensures that your incident response capability is accurately assessed and provides your organization’s leadership with a true understanding of its current maturity. With Optiv providing a detailed roadmap, your organization will have the necessary information and recommendations to mature your capability, and with it, a more effective approach to responding to and recovering from cyber incidents.
