Reducing Risk and Protecting Businesses

In today’s unpredictable threat landscape, vulnerability management programs must perform enhanced scanning, enhance risk reduction capabilities, continuously monitor real-time threat intelligence and support other advanced operational processes. As bad actors continue to grow in both numbers and sophistication, vulnerability management programs are on the front lines of defense for organizations to detect, mitigate and remediate threats.

The Optiv Vulnerability Management Program accounts for these challenges and supports the reduction of enterprise risk through a comprehensive evaluation of your organization’s capability to identify threats and vulnerabilities, while simultaneously supporting the confidentiality, availability and integrity of your critical business operations and data.

Optiv’s Solution

Optiv’s Vulnerability Management Program was designed to ensure security teams operate on a strong foundation of operational excellence.

The Optiv Program consists of three stages:

- Initial assessments will provide key insights into your security organization’s effectiveness, coordination and communication capabilities.
- Implementation will create or enhance your program’s ability to identify and reduce vulnerability risks to your environment.
- And the continuous improvement phase will ensure your operation accounts for the rapidly evolving threat landscape, your risk compliance posture and other critical security concerns.
Benefits
Vulnerability management programs can greatly contribute to an organization’s success. Optiv’s Vulnerability Management Program will improve your organization’s security posture through:

- Reduced impact of security incidents
- Reduced risk of a broader cyber-attack
- Improved configuration and vulnerability visibility
- Reduced mitigation and remediation time

Process Overview

How it works
Optiv’s Vulnerability Management Framework consists of a phased approach that enables Optiv subject matter experts to conduct a comprehensive analysis of your organization’s vulnerability management program.

Optiv’s Vulnerability Management Assessment Methodology is aligned with industry standards, such as NIST and OWASP, and takes a holistic approach to examine your existing Vulnerability Management Program by evaluating and enhancing the security domains aligned to your people, processes and technology.

The framework includes an assessment that evaluates domains within the program including the governance, technology and scanning and remediation processes that support your organizational security.

Within each domain are subdomains that include specific targeted areas for further analysis to discover all the security gaps within the existing program.

The information is collected through requested documentation, interviews and other methods and reviewed by our subject matter experts for a better understanding of where your organization’s security posture stands in comparison to your targeted goals and industry best practices.

We understand the challenges your organization’s security operations face and strive to improve your security posture and mitigate risks.

Secure greatness™
Optiv Security is the cyber advisory and solutions leader, delivering strategic and technical expertise to more than 7,000 companies across every major industry. We partner with organizations to advise, deploy and operate complete cybersecurity programs from strategy and managed security services to risk, integration and technology solutions. With clients at the center of our unmatched ecosystem of people, products, partners and programs, we accelerate business progress like no other company can. At Optiv, we manage cyber risk so you can secure your full potential.
