Digital Transformation Services

Security-First Holistic Digital Transformation (DX)

Optiv's holistic, strategic digital transformation solution can help you at any stage of your DX journey across the data value chain.

Optiv Solutions

The complexity digital transformation (DX) introduces requires a new approach to:

- **Unlock technology**
  Get the most out of your security technology investments

- **Evolve your workforce**
  Train your existing experts and/or augment their skills with new talent

- **Optimize operations**
  Improve communication and processes

- **Secure the future**
  Feel confident about your people, process and technology now, and with future growth in mind

Optiv meets you where you are on your journey. From concept through execution, we’ll leverage design-thinking methodologies to ideate, strategize, assess, design, build, integrate and manage these programs.
**How We Do It**

What are the five stages of a good digital transformation journey? Here’s our approach.

1. **Visioning**
   - Dive into a design-thinking workshop to align all stakeholders on business goals and define the roadmap.

2. **Assessment**
   - Get a digital maturity assessment and benchmark architecture/infrastructure, tools, and capabilities against the vision.

3. **Blueprint design**
   - We provide a next-generation architecture foundation design and governance model as well as use cases, tools, and work processes.

4. **Build and deploy**
   - Get a digital factory to develop and deploy use cases and infrastructure using agile methodologies.

5. **Run and operate**
   - We can set up a long-term transformation advisory office and ongoing CSaaS via an advanced fusion center or provide managed security services.

---

Don’t know where to begin? Start at the beginning or in the middle. We can advise, collaborate or deliver turnkey outcomes to accelerate speed-to-value leveraging our IP and experts.

---

**The Optiv Team Has Been There, Done That**

Our elite teams will help you build a solution tailored to your unique environment.

- **Experienced:**
  - 7,000 clients in 65+ countries, including 81% of the Fortune 100

- **Vetted:**
  - 10,000 security technology projects delivered annually

- **Fully staffed:**
  - 800+ field staff dedicated to client success

- **Specialized experts:**
  - 500+ technology consultants on staff

- **Tenured:**
  - 16 years is the average experience of Optiv’s Cyber Strategy and Transformation team

- **Industry-specific:**
  - 1,500 cybersecurity experts in healthcare, finance, manufacturing, education, retail, aerospace, government, oil and gas

---

**Case Study**

**Healthcare**

**Challenge**
- The client attempted to transform their platform deployments from manual to orchestrated deployments and experienced multiple failed attempts at developing the capability internally and externally
- The client lacked internal expertise for automating deployments and configuration of a large data lake (approx. 15 TB/day)

**Solution and Client Benefits**
- Optiv reduced complete redeployment and reconfiguration time of their Hadoop and ElasticSearch environment from months to days
- Orchestrated automatic deployments, configured infrastructure, applications and security settings
- Optiv consultants still assist with maintenance and upgrades for the platform and perform additional consulting engagements when needed
