Maximize Your Netskope Investment and Preempt Threats

For cybersecurity pros, it can sometimes feel like the only thing growing faster than the number of threats is the catalog of tools to manage them. Many don’t even know if their solutions are effective.

50% of security decision-makers say they don’t use all the features in their security technologies

Only 39% say they’re getting full value from their investments

53% admit they don’t know how well the tools they’ve deployed are working

Organizations must continuously mature their security environment if they want to stay ahead of hackers and insider threats, who are as innovative as they are persistent. The best way to keep pace is a strategic shift towards programmatic, iterative improvement.

Optiv Solutions

Optiv’s Maturity Services extend well beyond basic implementation and optimization of Netskope. We help establish a proactive security mindset, reducing risk and getting you the most out of your current technology.

Regular tuning delivers you from the chaos of reaction mode and allows you to prioritize applying critical adjustments and best practices.
How We Do It

Optiv’s Netskope Maturity Services program builds around a series of tailored weekly or bi-weekly fixed-fee sessions that begin with an extensive technology health check and use-case workshop or architectural review.

A regular cadence of optimization services rigorously assesses overall platform health and adjusts your current technology mix, allowing alignment to Netskope’s Value Realization Plan. This engagement matures your security footing, maximizes ROI and fortifies you against the environment’s inevitable evolution.

Netskope Maturity Service Focus Areas
- Architecture and configuration review
- Advanced feature adoption
- Adaptive access control
- Secure web gateway
- Cloud access security broker
- Data loss prevention
- Cloud encryption
- Private access for Zero Trust
- Remote browser isolation
- Cloud firewall
- Advanced analytics
- SaaS security posture management
- Public cloud security posture management

Why Operationalize Netskope?
- 84% of traffic is encrypted
- 2400 average number of cloud applications in use by organizations
- 50%+ of internet destined traffic is now SaaS traffic
- 48% of corporate data is in the cloud
- 35% of cross-app data movement contains sensitive data

Netskope Value Realization Plan

- Act based on custom policies and configurations
- Monitor alerts based on custom policies and configurations
- Collect data to observe cloud and web traffic
- Configure integrations and predefined policies
- Configure licensed Netskope components
- Leverage Advanced DLP and Advanced Threat Protection

Why Clients Choose Optiv

Each of our engagements is customized to the client’s distinct technical, business and cultural dynamics. Our Netskope consultants are seasoned and certified, informing a deep, objective view of your challenges.

Additional Netskope Services

Activation and Migration:
Configure baseline capabilities or get help migrating to a new security solution

Health Check and Optimization:
Ensure continued security technology effectiveness through review and remediation of identified issues, so your Netskope deployment is configured for optimal performance and protection

Secure greatness™

Optiv Security is the cyber advisory and solutions leader, delivering strategic and technical expertise to more than 7,000 companies across every major industry. We partner with organizations to advise, deploy and operate complete cybersecurity programs from strategy and managed security services to risk, integration and technology solutions. With clients at the center of our unmatched ecosystem of people, products, partners and programs, we accelerate business progress like no other company can. At Optiv, we manage cyber risk so you can secure your full potential.
